

Henry Miller Reclamation District No. 2131 Seeks Associate Engineer

Under the general supervision of the General Manager, manage individual projects, tasks and/or assignments including staff, prepare and monitor project budgets, assist with the ongoing management of water quality programs, design hydraulic control structures in coordination of the District's modernization program, perform comprehensive hydrography functions and manage data management systems. Shall also support non-engineering departments including operations, maintenance and others as necessary. Essential job functions include, but are not limited to:

- Prepare design documents including construction plans and specifications for a variety of water delivery system structures and support facilities. Projects may be constructed by contract, by in-house forces, or a combination of both. Review plans submitted by private engineers or others for conformance with District standards and requirements.
- Oversee the research, evaluation and design of new construction and engineering standards.
- Plan, organize, direct, coordinate and manage complex water projects and District programs to achieve District goals and objectives; and to provide technical input and expertise on studies related to water resources planning.
- Review, comment and prepare miscellaneous legal documents involved with easements, rights-of-way and property grants associated with any encroachment on existing District facilities or associated with the construction of new District facilities.
- Assists in oversight of purchasing, installation, service, maintenance and troubleshooting a variety of electronic equipment, for SCADA systems, and other measurement equipment used in water distribution and drainage conveyance operations of the District.

Salary Range

\$79,435 to \$145,620 DOQ

Deadline: Open until filled
